Wood Made Better

Make DIY beautiful with the Clearboard range of panel and board products. Clearboard is a stunning and unique range of boards and panels that provide clear, knot-free grain at lengths up to 1820mm and widths up by 450mm.

Made from carefully farmed pine, Clearwood is as easy to work with as it is beautiful, making it perfect for DIY applications.

Combine that with an extensive range of panel and board dimensions that are suitable for any projects, and you'll see that any interior project can be made with Clearboard.

The wide range of sizes which are delivered in two complementary DIY ranges (Laminated Panels & Non laminated Boards) provide the DIY customer with exciting possibilities and opportunities in their projects.

For a list of sizes see

www.pwp.co.nz/product/specifications.html

Better to Work Clearboard can stand up to being worked without splitting. It can be easily cut, drilled, sanded and more. The combination of soft wood and straight grain gives it strength and stability like few other timbers.

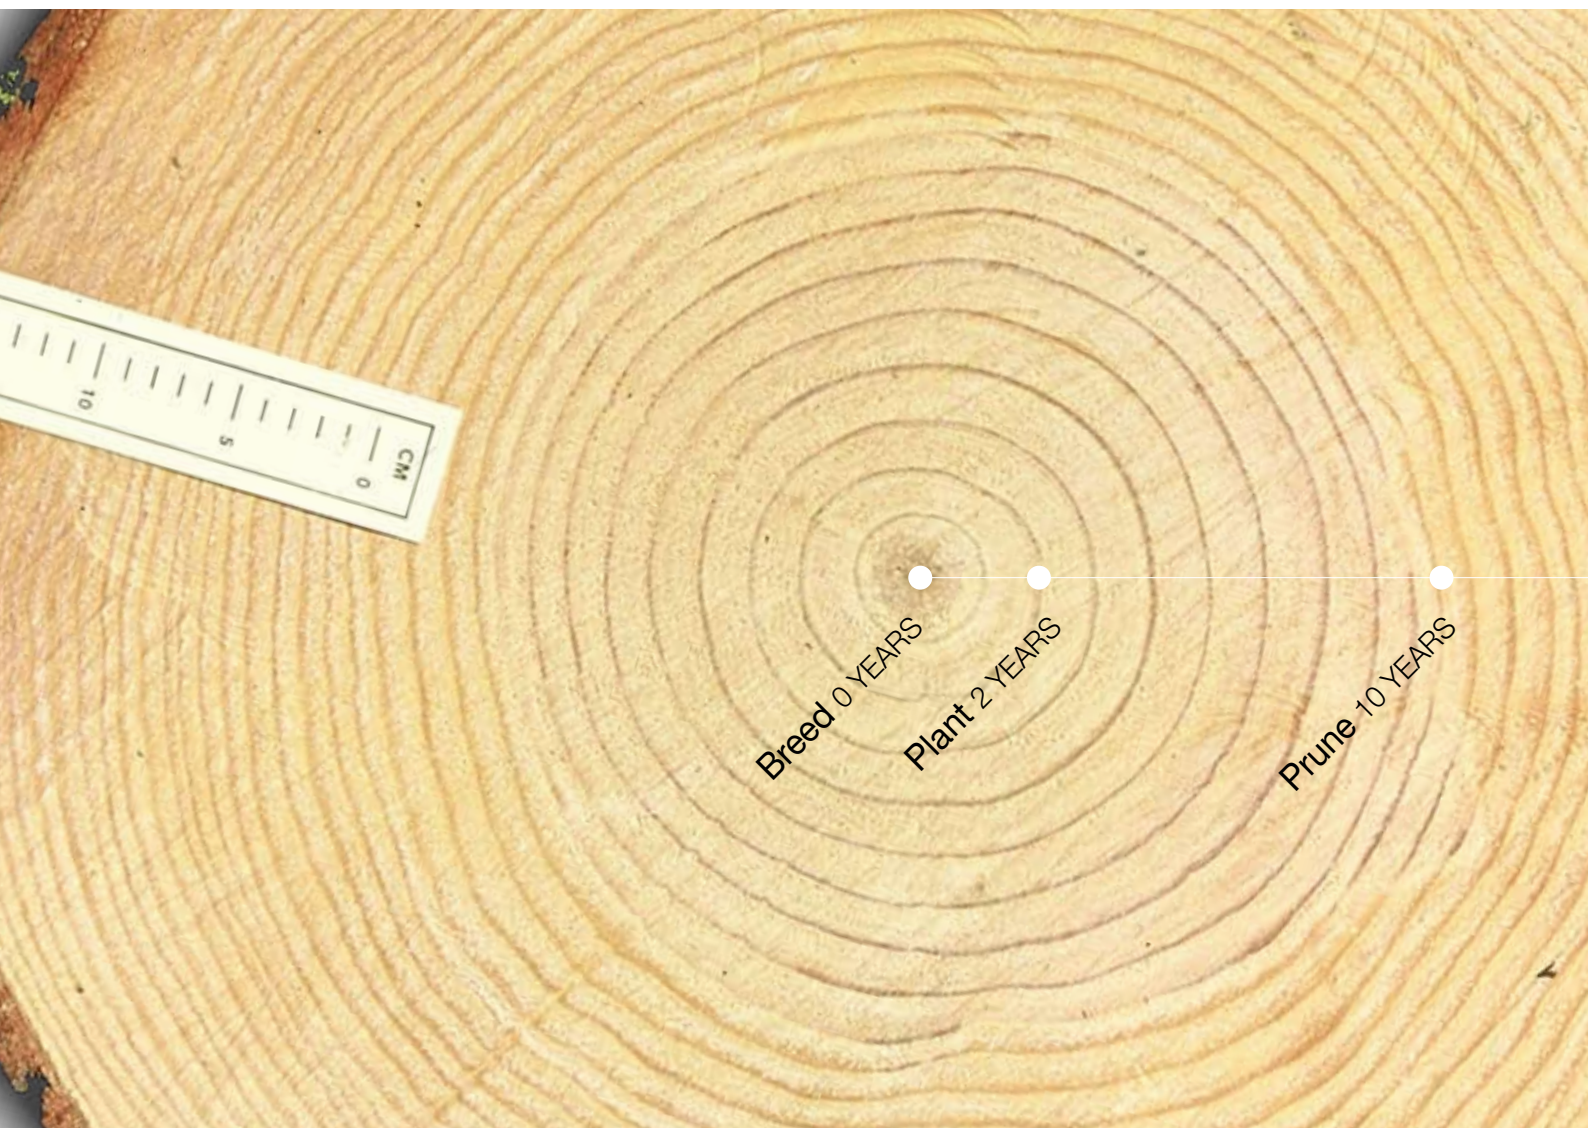

Better to Finish Clearboard comes to you pre-machined, meaning that it can be finished with a minimum of fuss with clear oils and clear coatings such as lacquer. It also paints and stains easily in a variety of colours. Its clear, even and consistent grain provides the perfect surface for any finish.

Better to Use Clearboard is a natural, durable and resilient material for interior applications. It is also completely formaldehyde free; allowing your project to be used for generations.

Tree Farming plantations produce better

Our tree farming process ensures that Clearwood is flawless, easy to work with, and affordable. Read the tree rings to see how we make our wood better.

Breed Radiata Pine seedlings were imported from Monterey, California back in the early 1930's and have established well in the New Zealand climate.

Plant Radiata Pine grows well with warm days and cool nights. Seedlings are planted in certified sustainable plantation forests in New Zealand.

er products

Prune The branches on the lower 6 metres of the trees are pruned at 10 years and 20 years to produce long clear lengths of wood.

Harvest Trees are harvested, machined and dried at 30 years old. A far quicker growth cycle than many other countries.

Process We mill and kiln-dry the raw timber using state of the art energy-efficient machinery..

From Our Forests to Your Home

Manufacture We mill and kiln dry raw timber using state of the art machinery. This lets us maintain accurate control over our product manufacture, and allows us to control grade outputs.

Delivery We package and deliver product both to New Zealand and overseas markets.

Use The care we take means that your timber projects could last for generations.

Benefits of Our Vertical Integration:

Quality Assurance Being involved from planting to delivery gives complete quality assurance. We have control of all quality parameters from the harvest of logs right through to delivery of Clearboard products to our customers.

Reliable Supply We are able to guarantee supply availability and efficient delivery. Supply chain lead times can also be reduced and controlled by having an integrated team approach to our customer's requirements.

Certified Environmental Management We have a holistic approach to the environmental management of our products. We achieved Forest Stewardship Council (FSC) certification for responsibly managed forests in 1998. FSC is the premier forest and forest product certification that is recognised worldwide by suppliers, retailers, and consumers. We hold the Chain-Of-Custody (COC) certificate covering the manufacturing of product through to completion.

We are a vertically integrated company, involved right from harvesting to delivery. This means quality assurance, reliable supply, and environmental certification.

Made of New Zealand

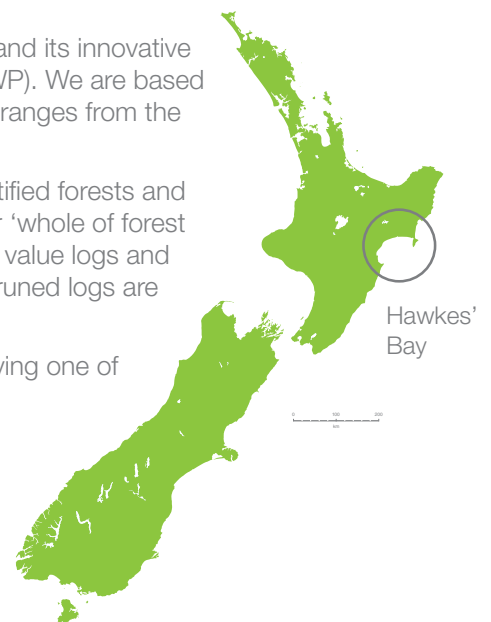

Our products are made of New Zealand. Our leadership in sustainable plantation forestry and our ideal climate for forest growth provide you with the best product.

Clearboard is uniquely a product of the New Zealand environment, its people and its innovative attitude to forestry. Clearboard is manufactured by Pacific Wood Products (PWP). We are based in the renowned wine growing region of Hawkes Bay, New Zealand. This area ranges from the inward alpine mountain ranges through wide plains to the rugged coastline.

Clearboard timber is sourced from our 'Forest Stewardship Council' (FSC) certified forests and is harvested and tracked through our production facilities. We always consider 'whole of forest solutions' in order to use every part of our forest resource. For example, lower value logs and waste sawmill chip are turned into pulp for paper products, while high value pruned logs are sent to our sawmill for conversion to Clearboards.

Areas of our forests are available for public access with the Eskdale Forest having one of the largest mountain biking facilities in New Zealand.
